Detailed Action

Restriction/Election

Specie Election Requirement:

This application contains claims directed to the following patentably distinct species of the claimed invention:

Specie Election Requirement:

Specie A: stability curve analysis which involves the detection of genetic signals which are the disruption of the double-helix

Specie B: stability curve analysis which involves the identification of coding regions

If Specie B is elected, then please elect one of the following subspecies:

Subspecie B-1: identification of coding regions which are simple genes

Subspecie B-2: identification of coding regions which are exons of split genes

Subspecie B-3: identification of coding regions which are regions of high thermal stability

Applicant is required under 35 U.S.C. 121 to elect a single disclosed specie for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. This distinctness or independence of a various stability curve analyses is because each involves a different goal with different processes. The distinctness or independence of the various coding region identifications is because each involves a different set

of criteria and characteristics from the other regions. These distinct differences demonstrate the presence of divergent subject matter which would create an undue search burden if all species and subspecies were to be initially examined.

Applicant is advised that a reply to this requirement must include an identification of the specie that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should an applicant traverse the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1631

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
